## Discovery Inc

Pune, Maharashtra, India

Hello,

I am excited to be applying for Discovery Inc Software Engineering Intern position. I am a third-year engineering student at Savitribai Phule Pune University. My degree emphasis is in Computer Engineering. What has motivated me to apply to this position is your several works in various different sectors.

In my last internship, I worked as a course creator Intern for MOHAN Foundation, a not-for-profit, registered non-government charity organisation in India that works in the field of deceased organ donation and transplantation. I and my team remotely worked and developed a course on Prevention of Kidney Disease on Moodle. We created interactive videos, activities using various plugins and 3 games using JavaScript.

Currently I am working on the project of applying Data Analysis on Cancer data. This initiative is taken by IEEE Pune Section to conduct a project on how data analysis can be applied to cancer data using machine learning algorithms. This project will be supervised by Dr. Atul Kulkarni who happens to be a Research Scientist at Rutgers Cancer Institute of New Jersey (CINJ) along with various mentors.

I scored 9.31/10 CGPA in First year and 8.91/10 CGPA in Second Year of Computer Engineering. Earlier this year, my school's engineering department recognized me as the top junior engineering student, which is also a reflection on my leadership, project, and teamwork skills. These traits will transfer to your internship position and make a noticeable contribution.

Thank you for reviewing my background in consideration for your internship opportunity. I would be encouraged to have the opportunity to meet with you to discuss more details of my coursework, prior internship, and other experiences relative to your position and company.

Sincerely,

Manasi Joshi
